

AMENDMENTS TO THE SPECIFICATION

Kindly replace the abstract of the disclosure with the new abstract, as follows:

Abstract of the disclosure

A resin container is provided which has a container body and a lid for closing the container body. The container body of the resin container is produced by injection-molding an amorphous thermoplastic resin. The container body form has a peripheral rise portion and a recessed flat portion defined by the peripheral rising portion. The peripheral rise portion has a height of 0.5 to 10 mm, and the recessed flat portion has an area of 1 to 100 cm², an average wall thickness of not more than 0.25 mm and a flatness of not more than 0.5 mm.
